Pair Programming with Github

JULY 6, 2021

How is Pair Programming going?

Pair Programming Tips

- Pair programming is hard! Even professional developers struggle to learn how to do it effectively.

- As a navigator, you can prompt the driver to talk more by asking questions (e.g. "I'm not sure I understand what you just added to line #, can you talk me through it?")

- As a driver, you can ask the navigator questions so they can help you with the code (e.g. "I'm not sure how to do X in python, what's the syntax?")

Today's Activity

1. Set up git-mob.

2. Continue working on your project while practicing pair programming and using git-mob.

- You will go into your TA's breakout room and work on the activity.

- Feel free to work with others in your room and ask questions of the group.

- The TA is there to assist you. If you want to ask me a question, come back to the main zoom room.

Questions?
